Acknowledgments

The Midwest Consortium developed this course for hazardous waste workers under cooperative agreement number U45 ES 06184 from the National Institute of Environmental Health Sciences.

We encourage you to comment on these materials. Please give your suggestions to those teaching the program in which you are now enrolled, or click on 'contact us' at <https://mwc.umn.edu>.

Warning

This material has been copyrighted by the Midwest Consortium for Hazardous Waste Worker Training. A recipient of the material, other than the Federal Government, may not reproduce it without permission of the copyright owner.

The material was prepared for use by experienced instructors in the training of persons who are or who anticipate being employed at a hazardous waste worksite. Authors of this material have prepared it for the training of this category of workers as of the date specified on the title page. Users are cautioned that the subject is constantly evolving. Therefore, the material may require additions, deletions, or modifications to incorporate the effects of that evolution occurring after the date of this material preparation.

Disclaimer

The Occupational Safety and Health Administration (OSHA) standard to help ensure health and safety at hazardous waste sites requires initial introductory general training on basic hazard recognition, use of provided protective equipment, basic hazard control, decontamination procedures and other relevant standard operating guides, followed by three days of on-site training, during which the specifics of the protective equipment, decontamination methods, and other procedures and information at the site are discussed and practiced. At that time, the elements of the site-specific standard operating procedures are detailed. Following initial training, annual refresher training is required; this program is designed to meet that requirement. (See 29CFR1910.120a-o).

Additional training is necessary to perform many activities. These activities include implementing the emergency response plan, identifying materials using monitoring instruments, selecting protective equipment, and performing work in permit-required confined spaces.
